SUPPLEMENTS

NEORNIPHARMA SUPPLEMENTS

PREVENTIVE FORMULATIONS TAILORED TO YOUR BIRDS

This catalogue is a comprehensive guide of the NeorniPharma range aimed at disease prevention through natural, highly concentrated supplements. This range offers a safe and successful alternative to medicinal treatments and a long-term solution. By targeting annually recurring problems, NeorniPharma aims to build immunity and consequently stronger birds.

All NeorniPharma products have unique formulas and are designed by veterinarians based on scientific research and practical experience.

Breeding and immunity			
PRODUCT	DOSAGE	INDICATION	PRICE (€)
Immuno Booster NEW (1 kg)	20 g/kg egg food/ feed	All-in premix	65
Immuno-Plus (100 ml)	2 ml/l	Immunity, extra energy, breeding	25
Immuno-Plus (250 ml)	2 ml/l	Immunity, extra energy, breeding	55
Immuno-Plus (1 l)	2 ml/l	Immunity, extra energy, breeding	179
Immuno Recup Caps (80 capsules)	1 cap/0.5-1 kg BW	Immunity, recovery, energy	24
Super Start-Up (200 g)	5 g/kg feed	Start-up supplement for chicks, black spot	25
Vit E + Se (100 ml)	2 ml/l	Extra vitamin E and selenium	17
Vit E + Se (250 ml)	2 ml/l	Extra vitamin E and selenium	35

Liver, muscles, and c	ondition		
PRODUCT	DOSAGE	INDICATION	PRICE (€)
Hepa-Plus (100 ml)	4 ml/l	Liver support	20
Hepa-Plus (250 ml)	4 ml/l	Liver support	36
Hepa-Plus (1 l)	4 ml/l	Liver support	79
Ready (100 ml)	5 ml/l	Form, condition, and improved blood flow	22
Ready (250 ml)	5 ml/l	Form, condition, and improved blood flow	48

Megabacteria and dysl	oacteriosis		
PRODUCT Dysbac Liquid (250 ml)	DOSAGE 2 ml/l	INDICATION Crucible, proventriculus and intestinal health	PRICE (€) 37

Natural oils			
PRODUCT	DOSAGE	INDICATION	PRICE (€)
Feather Energy (400 ml)	5 ml/kg feed	Fly oil	19
PikStop (100 ml)	1 ml/l	Pecking	28
Respicor (100 ml)	3 ml/l	Respiratory tract, heat stress	19
Respicor (250 ml)	3 ml/l	Respiratory tract, heat stress	35

Probiotics and disinfection													
PRODUCT	DOSAGE	INDICATION	PRICE (€)										
Neorni Stabilizer (1 l)	5-10 ml/100 ml	Probiotics - environment	20										
Probi-Plus (150 g)	3 g/l	Probiotics and prebiotics	18										
SilverSpray (500 ml)	Spray:	Disinfectant spray	15										
Skin Spray (200 ml)	Spray:	Probiotics - skin infections	17										

Acidification and drinking water disinfection

PRODUCT	DOSAGE	INDICATION	PRICE (€)
CU-For Liquid (250 ml)	1-2 ml/l	Acidification of drinking water	15
SilverFlox (1 l)	2 ml/l	Drinking water disinfection	32
Trichoryza Drops (50 ml)	1 drop per nostril	Throat elixir	17
Trichoryza Drops (250 ml)	10 ml/kg	Throat elixir	59
Trichoryza Drops (1 l)	10 ml/kg	Throat elixir	165

Vitamins, amino acid	s, electrolytes, min	erals, and trace elements	
PRODUCT	DOSAGE	INDICATION	PRICE (€)
Aminovital (100 ml)	2 ml/l	Amino acids, electrolytes, vitamins	19
Aminovital (250 ml)	2 ml/l	Amino acids, electrolytes, vitamins	35
Aminovital (1 l)	2 ml/l	Amino acids, electrolytes, vitamins	65
Condi-Plus (250 ml)	2 ml/l	Moulting supplement	26
Vita Energy (400 g)	10 g/kg feed	Conditioning powder – vitamins, minerals, and amino acids	30
Vita-Min-DCP (100 ml)	2 ml/l	Vit D, calcium, phosphorus, and other minerals	20
Vita-Min-DCP (250 ml)	2 ml/l	Vit D, calcium, phosphorus, and other minerals	35
Vita-Min-DCP (1 l)	2 ml/l	Vit D, calcium, phosphorus, and other minerals	70
Vita-Plus (100 ml)	2 ml/l	Water-soluble multivitamins	18
Vita-Plus (250 ml)	2 ml/l	Water-soluble multivitamins	28
Vita-Plus (1 l)	2 ml/l	Water-soluble multivitamins	65

PURE			
PRODUCT	DOSAGE	INDICATION	PRICE (€)
Brewer's yeast (1 kg)	15-30 g/kg feed	Amino acids, minerals, trace elements, Vit B	18
Dextrose (1 kg)	15-30 g/l	Energy, flavour	18
Electrolyte (500 g)	15-30 g/l	Hydration, stabilisation, balance	18
Yellow (100 g)	1-2 g/kg feed	Colour	15
Yellow (500 g)	1-2 g/kg feed	Colour	60
Highly digestible protein (400 g)	5-15 g/kg feed	Muscle growth, extra amino acids/proteins	25
Red (100 g)	1 g/kg feed	Colour	28
Red (500 g)	1 g/kg feed	Colour	85

BREEDING AND IMMUNITY

Natural breeding boost

Basic breeding

The basic breeding schedule is the essence of successful breeding. Several field trials have shown that the birds were better prepared for breeding, which was reflected in more nests and more young per nest.

Vit E + Se

Extra breeding (fertilisation)

Fertilisation problems occurring upon application of the basic schedules often have a nutritional or infectious cause.

- > nutritionally speaking, a **Vit E + Se** supplement would certainly be beneficial.
- In addition, certain germs with an important influence on fertilisation have been isolated in recent years. Faeces culture before breeding can be carried out easily and quickly at NeorniVet veterinary practice(± 24h).
- In specific situations/species, extra added value can be achieved with the use of specific supplements such as **Vita-Plus**, **Ready**, **Hepa-Plus** ...

IMMUNO BOOSTER NEW

All-in premix for young birds

Indication

- Supports breeding results and maintains the condition of your birds
- Supply of extra energy
- Supports the immune system
- Uses probiotica to help build up intestinal flora
- · Good development of the skeletal system
- Ideal for animals that are required to deliver top performances

Administration 20 g/kg

- 1 large scoop (20 g)/kg egg food/feed or 2 small scoops (2 g)/100 g egg food/feed
- During breeding season: add daily to egg food/feed
- Extra energy and accommodating deficits: 1-2 days per week throughout the year

Corn gluten, potato protein, potato protein fermentate, yeast and parts of it, chicory root fibre, spirulina, yeast, trimagnesium citrate, monoglycerides, diglycerides and triglycerides of fatty acids (c4), tricalcium citrate, L-carnitine, betaine, vitamin A, vitamin D3, vitamin E, vitamin C vitamin B1, vitamin B2, calcium D-pantothenate, vitamin B6, vitamin B12, vitamin K, niacinamide, folic acid, choline, clinoptilolite, copper, iron, zinc, manganese, potassium iodide, selenium, cobalt, lysine, methionine, glycine, echinaceae purpureae, curcuma, lactobacillus acidophilus

Immunity, extra energy, breeding

Indication

- Supports breeding results and maintains the condition of your birds
- Supply of extra energy
- Good appetite and feather patterns
- To be used before/after intense exertion/competition
- Supports the development and growth of young animals

Administration 2 ml/l drinking water

- Breeding: daily from 2-6 weeks before breeding. Stop administration from first clutch.
- Show/competition: starting 5 days before show/ competition, daily 2 ml/l drinking water or 2 ml/kg body weight directly into the beak
- Immunosuppression and disease: 2 ml/l drinking water for 14 days or 2 ml/kg body weight directly into the beak until recovery
- Viral infections (circovirus, bornavirus, etc.): for 4-8 weeks to support and promote immunity

IMMUNO RECUP CAPS

Immunity, recovery, energy

Indication

- Stimulates recovery after illness/exertion
- Supply of extra energy
- · Supports the immune system
- Ideal for top performance

Administration

- Recovery/immunity boost: 1 capsule/0.5-1 kg orally for 5-10 days
- Extra energy: 1 capsule/0.5-1 kg orally
- Pigeon: day of return home, 1 capsule/pigeon
- To support breeding: for 14 days before mating until laying 1 capsule/0.5-1 kg
- Immuno Recup Caps can be administered directly or with the food. When administered via food, the full dose should be consumed.

Maize gluten, potato protein, potato protein fermentative, yeast and parts of it, chicory root fibre, spirulina, yeast, trimagnesium citrate, monoglycerides, diglycerides and triglycerides of fatty acids (c4), tricalcium citrate, L-carnitine, Vit A, Vit D3, Vit E, Vit C, Vit B1, Vit B2, calcium D-pantothenate, Vit B6, Vit B12, Vit K, niacinamide, folic acid, choline, clinoptilolite, copper, iron, zinc, manganese, potassium iodide, selenium, cobalt, lysine, methionine, glycine, echinaceae purpureae, curcuma, lactobacillus acidophilus

SUPER START-UP

Start-up supplement for chicks, black spot

10 Indication

- Smooth start for your young chicks in the first 6 weeks of life
- Natural suppression of bacterial and necrotic enteritis/diarrhoea
- Rapid growth and larger birds due to smooth start and natural suppression of black spot

Administration 5 g/kg egg food/feed

 Administer daily from the first clutch until the young leave the nest

Extra vitamin E + selenium

100 ml **€17** 250 ml **€35**

- + spirulina
- + zinc + linseed oil

Indication

- For animals with a deficiency of vitamin E selenium
- · Recommended for nervous symptoms

Administration

- 2 ml/l drinking water or 1 ml/kg body weight directly into the beak
- Recommended in case of nervous symptoms: for 7-10 days

Fertility +++

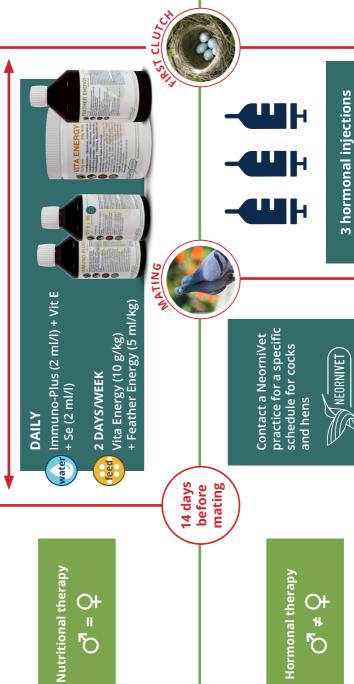

Daily 2 ml/l or 4 ml/kg feed daily for 2-4 weeks, prior to breeding until the first clutch

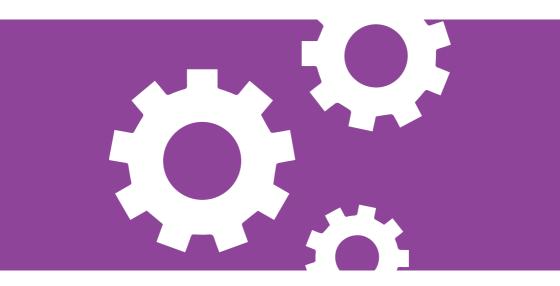

Fertility therapy

Individual therapy (cocks o' and hens 9)

START-UP AFTER MATING

LIVER, MUSCLES, AND CONDITION

Liver support

14

Indication

- Supports liver function
- · Relieves stress on the liver

Administration

- Curative: 4 ml/l drinking water for 5-14 days
- Prevention: 2 ml/l drinking water, 2 to 3 days per week

Can be administered daily to support the liver during administration of medication or dye

Form, condition, and improved blood flow

Indication

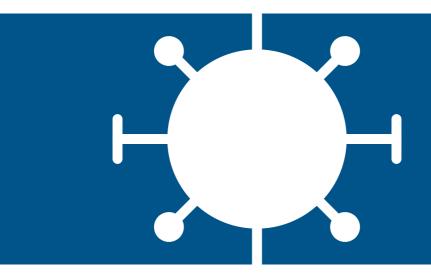

- · Condition booster: improves flight performance
- · Stimulates fat metabolism and endurance
- · Supports blood circulation

Administration 5 ml/l drinking water

- Condition boost:
 - · For exhibition/flying season: for 2 weeks
 - For important flight: for 2-5 days
- **Fat birds:** for 3-5 days a week until the result is achieved
- Anaemia: 7-10 days
- Adjusted dosage songbirds <250 g body weight (canary, siskin, etc.): 1-2 ml/l

MEGABACTERIA AND DYSBACTERIOSIS

>> Chelated copper and zinc

>> Extra fibre >> Fish oil

Crop, proventriculus and intestinal health

Indication

- Forms a protective film over the intestinal mucosa
- Increases the animal's immunity
- Helps to maintain the natural balance of intestinal flora
- To be used in cases of watery faeces

Administration 2 ml/l drinking water

- Prevention: 1 to 2 days per week
- In case of digestion problems: for 7-14 days

Prevention of megabacteriosis and dysbacteriosis

- 1-2 days a week 2 ml/l drinking water
- May be combined with ACS

Trichoryza Drops

The best way to tackle trichomoniasis without losing form

Proven effectiveness against resistant trichomonas!

NATURAL OILS

FEATHER ENERGY

Flight oil, source of energy from lipids

22

Indication

- Source of energy from lipids
- Feather quality, optimal feathering
- · Extra vitamins A, D, and E
- Hoge source of omega 3-6-9 fatty acids

Administration 5 ml/kg feed

- Moulting; 2 days per week
- Breeding: 2-3 days per week
- Flying season:
 - Departure: for 2-5 days before basketing, in combination with Vita Energy
 - Homecoming: for 2 days, in combination with *Immuno Booster NEW*

Can be used to improve the absorption of Immuno Booster NEW and Vita Energy with the feed

PIKSTOP

Pecking, restlessness

24

Indication

Pecking in birds and poultry

Administration

• 1 ml/l drinking water for 4-6 weeks

Feather picking/pecking

Administer simultaneously with *Immuno-Plus* for the best results

Respiratory tract, heat stress

Indication

- Natural solution to support respiratory problems
- Suppression of pain/inflammation in case of respiratory problems
- Stuck slime
- Heat stress

Administration 3 ml/l drinking water or 0.5 ml/kg body weight directly into the beak

- Preventive: when purchasing new birds: for 10-14 days
- Curative: in mild to moderate respiratory problems, for 10-14 days
- Heat stress: 3-5 ml/l

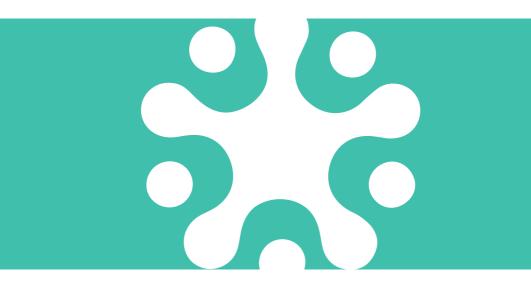

Additional support for racing pigeons in hot weather 3 ml/l of drinking water, in combination with *Aminovital* on the basketing day

2026

neofalco products for falcons

PROBIOTICS AND DISINFECTION

NEORNI STABILIZER

Probiotic ambient spray

28

Indication

- Reduction of pathogenic load in your birds' surroundings
- Forms a stable and healthy environment by occupying it with safe, probiotic bacteria

Administration

- To be used diluted: 5-10% (5-10 ml/100 ml) in lukewarm water
- · Mist the entire area to be stabilised
- First week, spray the loft daily (may be done in the presence of birds, including nestlings).
- Subsequently, spray twice a week to maintain probiotic protection
- The product diluted with water has a maximum shelf life of 5 days.

Can be nebulised in the presence of the birds/ pigeons, especially during important or stressful periods when the bacterial presence in the environment rises

Probiotics and prebiotics

Indication

- Increases the beneficial flora in the crop and the intestines
- Ensures improved digestion and supports the initiation of the crop and intestinal flora in chicks
- After a course of antibiotics

Administration 3 g/l drinking water or 6g/kg feed

- Preventive: for 2 days/week
- Wet droppings or after antibiotic treatment: for 5-7 days
- Refresh daily
- May be combined with other supplements (vitamins)

Change drinking water twice daily or administer through the feed

Disinfectant spray

Indication

- Broad-spectrum disinfectant
- Bactericide Fungicide Virucide

Administration

- Ready-to-use disinfectant spray
- Suitable for lofts, cages, equipment, and eggs
- Indicated when cleaning soiled plumage (faeces, blood)

Safe to apply in the presence of your birds

SKIN SPRAY

Probiotic spray for skin infections

32

Indication

- · Suitable for birds with sensitive skin
- · To be used externally for care of the skin
- Reduces the formation of scaly skin

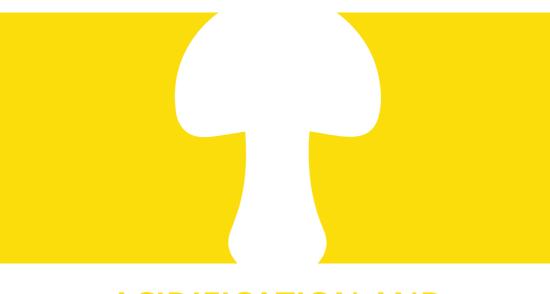

Administration

Mist the area to be stabilised

Powder comb/flavus/white flakes

Spray the comb or infected area daily. Not harmful to eyes or respiratory tract.

ACIDIFICATION AND DRINKING WATER DISINFECTION

Acidification of drinking water

34

Indication

Acidification of drinking water, lowering pH

Administration 1-2 ml/l drinking water

• Prevention: 1 to 2 days per week

Exceptionally concentrated formula, very economical to use

Drinking water disinfection

Indication

- Water disinfection
- Prevention of harmful bacteria, viruses, yeasts and moulds
- · Immunity support

Administration

2 ml/l drinking water

35

TRICHORYZA DROPS

Throat elixir

36

Indication

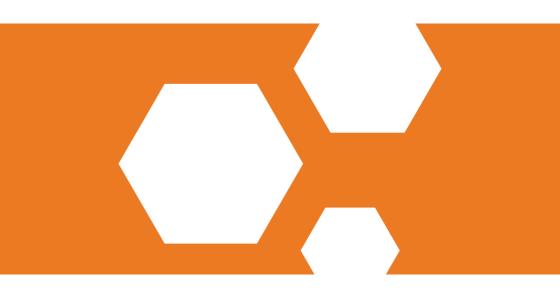

- Preventive approach to trichomoniasis
- Supports throat and crop health
- Positive effect on the upper respiratory tract
- Plays a role in resistance to disease

Administration

- The day after returning home:
 - Recommended administration: 10 ml/kg feed
 Always make fresh before each feeding. Most effective up to 2 hours after mixing.
 - 5 ml/l drinking water
 - 1 drop per nostril
- Prevention: 1 day per week.
- At high pressure: 2 days per week
- · Caution: stains clothing and hands

Proven efficacy in resistant trichomoniasis cases: 20 ml/kg feed for 5 days

VITAMINS, AMINO ACIDS, ELECTROLYTES, MINERALS, AND TRACE ELEMENTS

AMINOVITAL

Amino acids, electrolytes, and vitamins

38 Indication

- All essential amino acids crucial for proper moulting/feather development/pigmentation
- Stimulates recovery/repair
- · Muscle building and recovery

Administration 2 ml/l drinking water

- Racing pigeons: 5 ml/l during the racing season
- Throughout the entire year: 1 to 2 days per week
- Throughout the entire moulting period: 3 days/ week. May be combined with *Condi-Plus*.

Additional support for racing pigeons in warm weather 5 ml/l drinking water, in combination with *Respicor* on the basketing day

Dextrose, glycerol, sodium chloride, prebiotic fibre, trimagnesium citrate, beetroot juice, potassium chloride, sucrose, calcium chloride, tricalcium citrate, lysine, methionine, threonine, tryptophan, hystidine, carnitine, betaine, choline, vitamin B1, vitamin B2, niacinamide, calcium D-pantothenate, vitamin B6, vitamin B12, folic acid, biotin, vitamin C, vitamin E, selenium, copper, zinc, manganese, mix of natural aromatic components, L-isoleucine, L-valine, L-leucine

38

Moulting supplement

Indication

- · Supports bird health during moulting
- Supports the metabolism
- Supply of extra energy
- Increases appetite

Administration 2 ml/l drinking water

 Throughout the entire moulting period: 3 days/ week. May be combined with Aminovital. 39

VITA ENERGY

Conditioning powder - Vitamins, minerals, and amino acids

Konditionspulver – Vittaminen, Minerales and
Konditionspulve

40

Indication

- Condition booster and extra energy
- Extra vitamins, minerals and amino acids
- Increases endurance
- Breeding stimulation

Administration

Recommended administration: 10 g/kg feed

Administration via drinking water: 4 g/l

- General: Throughout the year, 1-2 days/week.
 In case of poor/impaired condition: for 14 days.
- Breeding stimulation: 2-4 weeks prior to breeding, twice a week to daily
- Pigeon: Medium distance/long distance, 2-5 days before basketing

Dextrose, maltodextrin, soya protein concentrate, calcium carbonate, yeasts and parts thereof, trimagnesium citrate, monosodium phosphate, sodium bicarbonate, sodium chloride, potassium chloride, trisodium phosphate, tricalcium citrate, vitamin A, vitamin D3, vitamin E, vitamin K, vitamin B1, vitamin B2, vitamin B3, vitamin B5, vitamin B6, vitamin B11, vitamin B12, biotin, vitamin C, choline chloride, iron, copper, zinc, manganese, potassium iodide, selenium, lysine, methionine, tryptophan, threonine, mixture of natural aromatic components

Liquid source of vitamin D, calcium, phosphorus, and other minerals

100 ml **€20** 250 ml **€35** 1 l **€70**

> Extra calcium and phosphorus

Indication

- For birds with a deficiency in Vitamin D3, calcium, phosphorus and other minerals
- Supports bone formation and development in young animals
- Supports egg shell formation
- Poor egg shell quality/shell-less eggs

Administration 2 ml/l drinking water

- Prevention: 2 ml/l
 - 2 weeks prior to breeding until the eggs are laid:
 2-3 days per week
 - For the first 6 weeks of life: 2-3 days per week
- Curative: 5 ml/l for 14 days
- Support for fractures: for 6 weeks, 5 ml/l drinking water or 0.5 ml/kg body weight directly into the beak

-Change drinking water twice daily to avoid sedimentation, or administer via the feed (preventive: 4 ml/kg egg food/feed - curative: 10 ml/kg egg food/feed

41

Water-soluble multivitamins

42

Indication

- Supplement containing all essential vitamins
- Overall daily health
- · Prevention of chronic vitamin A deficiency

Administration 2 ml/l drinking water

- Weekly: for 1 to 2 days per week
- After illness/recuperation: for 3 to 5 consecutive days

For parrots and parakeets, we strongly recommend administering 1-2 days per week *Vita-Plus* via the drinking water to prevent vitamin A deficiency

High concentration of vitamin K helps prevent or stop bleeding

PUREPURE

BREWER'S YEAST

Indication

- Amino acids, minerals and trace elements

SCHEDULES FOR SONGBIRDS

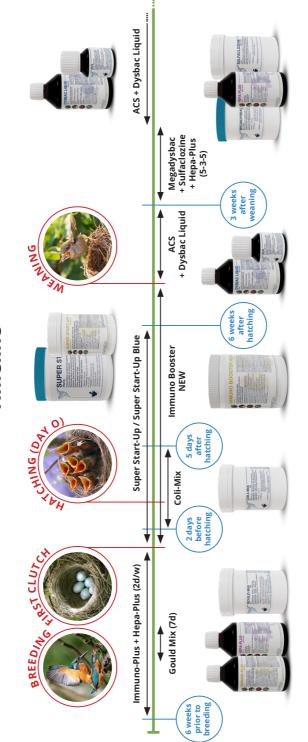

NEORN

Mental Annual Euro and Canary schedule

46

breeding

- Breeding boost
 - Liver support
- Black spot prevention

Weaned young

- Prevention coccidiosis/atoxoplasmosis, megabacteriosis and dysbacteriosis
- Limiting pressure with immunity build-up

Suppression of coccidiosis/atoxoplasmosis,

bacteria, viruses, yeasts and fungi

Optimal start and mushy chick disease

First clutch until weaning

Preparation for

Annual Euro & Canary schedule

The annual schedule is a general guide for preparation, breeding, hatching, weaning and moulting. Talk to your veterinarian about the specific requirements for your birds and devise a tailored schedule together.

Preparation from 6-8 weeks prior to breeding

- 1. A healthy environment is the best start! (see Virkon™S or SilverSpray)
- 2. Prevention of atoxoplasmosis/coccidiosis + megabacteriosis/dysbacteriosis
- **Veterinarian:** bird check-up + faecal analysis 6-8 weeks prior to breeding
- Only use courses of treatment in case of problems:
 - 5 days Sulfaclozine (3 g/l) + Hepa-Plus (4 ml/l) + Megadysbac (5 g/l)
 - 3 days Hepa-Plus (4 ml/l) + Megadysbac (5 g/l)
 - 5 days Sulfaclozine (3 g/l) + Hepa-Plus (4 ml/l) + Megadysbac (5 g/l)
- 3. For 6 weeks prior to breeding
- Immuno-Plus (2 ml/l) daily
 - Breeding boost; birds will be in top condition
- 1-2 days per week Hepa-Plus (4 ml/l)
 - Liver support
- As required: Vita-Plus, Vita Energy, Ready, Vit E + Se, Vita-Min-DCP
 - These are suitable for use with Immuno-Plus
- Extra: black spot prevention
 - For 7 days **Gould Mix (5 g/l)** during breeding preparation
- 4. Prevention of ectoparasites
- Haematophagous mites
 - **Exzolt:** 1 ml/l for 1 day, repeat on days 7 and 14
 - Does not affect fertility and nestlings/young
 - Can be repeated every 3 months
 - Extra prevention of haematophagous mites
 - Before occupation, treat loft with:
 - Derma-Plus
- Feather mites
 - Vermi-Complete (1 ml/l bath water)

Breeding: First clutch until weaning

- 1. Immuno Booster NEW (2 g/100 g or 20 g/kg egg food/feed)
- All-in premix for young birds
- 2. First 6 weeks
- Option 1: Super Start-Up (5 g/kg egg food/feed)
 - Natural suppression and prevention of coccidiosis/atoxoplasmosis, bacteria, viruses, yeasts and fungi
- Option 2: Super Start-Up Blue (20 g/kg egg food/feed)
 - Suppression of coccidiosis/atoxoplasmosis, bacteria, viruses, yeasts and fungi

- 3. Start from 2 days before hatching until 5 days after hatching Coli-Mix (5 g/l)
- Prevention of mushy chick disease (Colibacillosis)
- Alternative to Coli-Mix: Gould Mix (5 g/l)

Breeding: weaned young

- 1. A healthy environment is the best start!
- Virkon™S or SilverSpray
 - Environment free of coccidiosis/atoxoplasmosis, bacteria, viruses, yeasts and moulds
- **Neorni Stabilizer:** Probiotic ambient spray
 - Prevention by reducing bacterial presence in the environment
- 2. Preventive cure
- Third week after weaning
 - Increased susceptibility to atoxoplasmosis/megabacteriosis
 - 5 days Sulfaclozine (3 g/l) + Hepa-Plus (4 ml/l) + Megadysbac (5 g/l)
 - 3 days Hepa-Plus (4 ml/l) + Megadysbac (5 g/l)
 - 5 days Sulfaclozine (3 g/l) + Hepa-Plus (4 ml/l) + Megadysbac (5 g/l)
- 3. Then throughout the year (from weaning to breeding period)
 - ACS 3-5 days (0.5 ml/l) 1-2 times per month
 - · Prevention of coccidiosis while improving immunity!
 - Dysbac Liquid 1-2 days per week (2 ml/l)
 - Prevention of megabacteriosis and dysbacteriosis

48 Moulting period

Throughout moulting Condi-Plus + Aminovital:

- Condi-Plus (2 ml/l): 3 days/week
- Aminovital (2 ml/l): 3 days/week
- May be administered simultaneously

Intermediate seasonThroughout the year (from weaning to breeding)

- ACS 3-5 days (0.5 ml/l) 1-2 times per month
 - Prevention of coccidiosis while improving immunity!
- Dysbac Liquid 1-2 days per week (2 ml/l)
 - Prevention of megabacteriosis and dysbacteriosis
- As required: Vita-Plus, Vita Energy, Ready, Vit E + Se, Vita-Min-DCP

At NeorniPharma, we always strive for the best long-term solution. We are constantly looking for **alternatives to anti-microbials** to limit the risk of resistance. The goal is to give our birds **as few preventive treatments with antimicrobial agents as possible**. Clinical research and any additional tests are crucial for this. After the diagnosis, an appropriate treatment can be administered. **Antibiotics are not harmless**. Consult your vet for advice about their correct and responsible use. **Autopsy**: don't simply throw away a bird that has died! The cadaver can provide a lot of information to ensure appropriate treatment can be sought. The cadavers are best kept cool (fridge) and analysed within 24 hours (max. 72 hours).

20 g/kg egg food /feed

Suppression of coccidiosis/ atoxoplasmosis, bacteria, viruses, yeasts and fungi

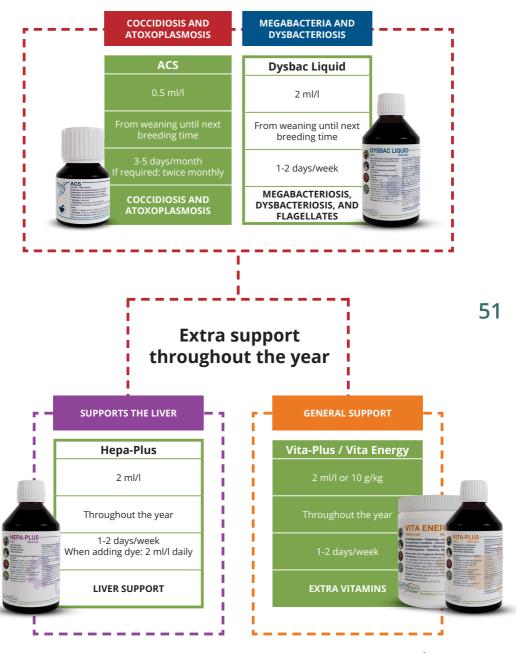

Immuno Booster NEW contains all essential components for rearing young birds. It is a unique comprehensive premix to mix under egg food/feed, providing all necessary nutrients in exceptionally high concentrations.

Immuno Booster NEW Polypeptides Keep the birds in form during breeding. Saccharomyces cerevisiae Source of protein, amino acids, and nucleotides. Chicory root fibre Prebiotic fibre: balanced digestion. Spirulina Source of protein, fats, carbohydrates, vitamins, and minerals. Electrolytes Fluid balance. Fatty acids Energy, balanced digestion. All water-soluble and fat-soluble vitamins General immunity, antioxidants, growth, energy release. All amino acids Building muscle and feather cover. L-carnitine Supports fat digestion and muscle building. Choline Liver support. Minerals (cobalt, iron, copper, zinc, manganese, iodine, selenium) General immunity, antioxidants, growth, energy release. Clinoptoplite General health and intestinal health. Probiotics Intestinal flora stabiliser: Turmeric and echinacea General immunity and health

Breeding: weaned young

Annual Exotics schedule

The annual schedule is a general guide for preparation, breeding, hatching, weaning and moulting. Talk to your veterinarian about the specific requirements for your birds and devise a tailored schedule together.

Preparation from 6-8 weeks prior to breeding

- 1. A healthy environment is the best start! (see Virkon™S or SilverSpray)
- 2. Prevention of flagellates (cochlosomosis) + campylobacteriosis
- Veterinarian: bird check-up + faecal analysis 6-8 weeks prior to breeding
- Only use courses of treatment in case of problems:
 - For 7 days Gould Mix (5 g/l) + Hepa-Plus (4 ml/l)
- 3. For 6 weeks prior to breeding
- Immuno-Plus (2 ml/l) daily
 - Breeding boost; birds will be in top condition
- 1-2 days per week **Hepa-Plus (4 ml/l)**
 - Liver support
- As required: Vita-Plus, Vita Energy, Ready, Vit E + Se, Vita-Min-DCP
 - These are suitable for use with Immuno-Plus
- Prevention of cochlosomosis + campylobacteriosis

The cadaver can provide a lot of information to ensure appropriate treatment can be sought. The cadavers are best kept cool (fridge) and analysed within 24 hours (max. 72 hours).

Vaccination schedule for pigeons

3-4 WEEKS INTERVAL

Male

Age 6 weeks	Rota-paramyxo	
Age 8 weeks	Salmonella/paratyphoid herpes	NEORNIVET
Age 10 weeks	Smallpox (injection/follicle method)	Need advice?
3-4 weeks before training Rota-paramyxo BOOSTER		Your Neorni veteri- narian will be happy
Mid-June - early July*	Paramyxo-herpes BOOSTER (HERPES)	to help

TIMING The sequence and repetition of vaccines are partly determined by the infection pressure in your loft. Contact NeorniVet for guidance on this.

YOUNG PIGEON DISEASE A double vaccination against rotavirus, given 3-4 weeks apart, provides the best protection against young pigeon disease (commonly referred to as 'adeno'). When infection pressure is high, a third booster may be given 3 weeks before training Vaccinations against adenovirus and circovirus are not recommended because their effectiveness is unproven and there is a lack of pigeon strains.

,SUPPORT Support your youngsters during the vaccination period in the first 6 weeks after weaning with Immuno-Plus, Dysbac Liquid and Trichoryza Drops.

Old pigeons and yearlings

Mid-February Smallpox (injection/follicle method) certainly benefits yearlings **Late February** Paramyxo-herpes 14 days later Salmonella/paratyphoid**

SUPPORT Get your old pigeons and yearlings off to the best start of the new season with Trichoryza Drops, Dysbac Liquid and Ready.

Breeding pigeons:

6-7 weeks before breeding	Salmonella/paratyphoid**	
Mid-October	Paramyxo-herpes	

SALMONELLA/PARATYPHOID Depending on infection pressure and immunity, it may be necessary to treat pigeons before vaccination, and vaccinate once or twice.

HERPES In case of herpes problems during the rearing of young pigeons, it is recommended to vaccinate breeding hens twice against herpes.

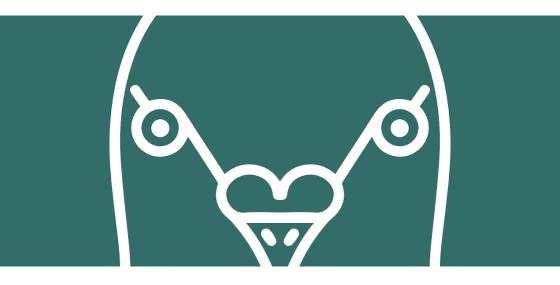

PARAMYXO An annual paramyxo vaccination is mandatory for breeding pigeons.

SUPPORT Stimulate breeding pigeons 2 weeks before pairing until the first clutch with Vita-Min-DCP and Immuno-Plus. Poor breeders/old cocks: supplement with Vit E + Se.

- * 3-4 weeks before the critical period
- ** In case of previous infection, possibly after preventive treatment

Preparation for breeding

Once the pigeon season finishes in late September/early October, we strongly recommend you collect mixed faeces from the breeders for 5 days and have it analysed. This mixed faeces is checked for worms, coccidiosis, and yeasts/fungi, following which a culture is grown to check for paratyphoid/salmonella. The results can be used to draw up a vaccination plan.

Paratyphoid/salmonella NEGATIVE		Paratyphoid/salmonella POSITIVE
Treatment	Not necessary	Required for 10 days according to antibiogram
Vaccination Salmone	Strongly recommended	Required
Time of vaccination	6-8 weeks before pairing	2 days after treatment

Discuss a plan of action tailored to your loft or problem with our veterinary practice NeorniVet (+32 (0)11 96 91 02)

Faecal analysis

- Collect faeces every day for 5 days and refrigerate it.
- Send the faeces, or take your sample to your veterinarian
- If required, the pigeons can be checked at the same time
- This is not harmful to moulting pigeons

SCHEDULES FOR PSITTACIDAE

Psittacidae PARROTS AND PARAKEETS

General health

To prevent chronic deficiencies

Throughout the year 1-2 days/week Vita-Plus or Vita-Energy

Breeding

PREVEN-TION

6-8 weeks prior to breeding

Control mixed faeces from 3-5 days (vet)

- If necessary, deworm with Vermi-Complete
 - Group: 5 ml/l drinking water
 - Individual: 1 ml/kg body weight in the beak

Control ectoparasites

- Group: Vermi-Complete 1 ml/l bath water
- Individual:
 - <250 g: Endo-Ecto Kanarie
 - > 250 g: V-Exmite Drops

STIMU-LATES

daily 4-6 weeks before breeding

Vita Energy + Immuno-Plus

With drinking water and/or

NEORNÌ

REARING

daily from hatching to autonomy

Natural brooding:

Immuno Booster NEW 2 g/100 g egg food/feed + Immuno-Plus 0.2 ml/100 ml drinking water

Hand rearing:

Immuno Booster NEW 2 g/100 g soft food once per day + Immuno-Plus 1 ml/kg body weight once per day

Crop and digestive problems

Veterinarian check-up

- Disease testing through blood feathers cloacal swab
- · Crop swab

Moulting - Feathers

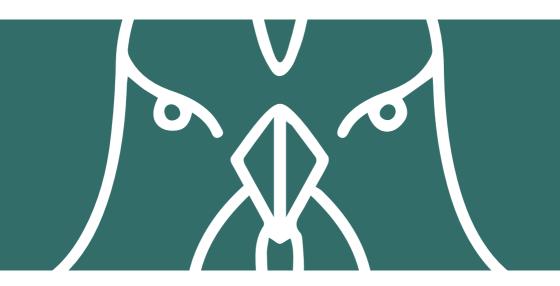

SilverSpray

New disinfectant spray

NEORNI

SCHEDULES FOR CHICKENS

Vaccination schedule

Chicks

Support

As required:

- First 14 days of life Immuno Booster NEW (20 g/kg feed)
- General vitamins: 3 days/week Vita-Plus (2 ml/l)
- Intestinal health + prebiotics: 2 days/week **Dysbac Liquid** (2 ml/l)
- Extra growth + amino acids: 2 days/week Aminovital (2 ml/l) + Immuno-Plus (2 ml/l)

Vaccinations

GOLD STANDARD: 3 vaccines (Marek, NCD and smallpox)

D1 (1st week of life)	Marek (2 strains) + IBD + NCD (injection)
D1 (1st week of life)	Infectious bronchitis (eye drop)
1st week of life	Coccidiosis (drinking water)

Growing chickens (from 7 weeks) and full-grown chickens

Support

66

- General vitamins: Vita-Plus (2 ml/l) Prevention: 2 days/week After treatment: for 7 days.
- Intestinal health + prebiotics: **Dysbac Liquid** (2 ml/l). Prevention: 2 days/week In the case of flatter faeces: for 7 days.
- Respiratory tract support: **Respicor** (3 ml/l). Prevention: 2 days/ week In the case of respiratory problems: for 7-14 days.

Vaccinations

May-June (annual!)	Smallpox (+ ILT)	
May-June (annual!)	NCD (injection/drinking water)	
August-September	NCD (injection oil) Mandatory for exhibition and sale	
August-September	Infectious bronchitis (drinking water)	

Advice for birds of all ages

NEORN

 GOLD STANDARD: 3 vaccines (Marek, NCD and smallpox). Other vaccines are relevant to specific problem areas, and not routinely recommended.

Advice and tips

General health

Throughout the year 1 day/week Vita-Plus (2 ml/l)

During moulting
3 days/week
Aminovital and Condi-Plus (2 ml/l)

Weak egg shells

Vita-Min-DCP for 21 days

- Group: 5 ml/l or 10 ml/kg feed
- Individually through the beak: 1 ml/kg body weight Worming day 1, day 7 and day 21
 - Group: Vermi-Complete (5 ml/l)
 - Individually through the beak: Endo-Ecto Plus Caps: 1 capsule/kg body weight, or Vermi-Complete 1 ml/kg body weight

Prevention:

Check mixed faeces every 3-4 months:

 Make sure you also have mixed faeces from 2-3 days analysed for endoparasites - these may be responsible for deficiencies, and cause irregularities in eggshells

Vaccination RT+IBmulti+ND+EDS

Viral infections and malformations near the fallopian tube

67

Snot

Mild infection + new animal 7-14 days Respicor (3 ml/l)

Wry neck/stargazing

Wry neck 14-21 days Vit E + Se

Group: 2 ml/l **Individual (beak):** 0.2-0.5 ml/kg body weight

Exhibition or show

General form 7 days before the show **Immuno-Plus (2 ml/l)** Yellower legs 14-21 days before the show PURE Yellow 1-2 g/kg

If problems persist, make an appointment with your vet

Export prices

Please find the NeorniPharma export prices for private individuals and professionals below. These prices are **exclusive of VAT**. The VAT rates for the country of destination are applied when shipping. As always, professionals are VAT exempt.
